

**Joel Acedo**  
Developer

I am computer engineering student, interested in mobile and full stack web development, as well as other topics such as online marketing.

I am very self-motivated to start working on new challenges in a professional environment, and carry out interesting projects with the latest technologies of the market to continue improving a little more each day.

## Professional Skills

Android

HTML 5 & CSS 3 & JS

MongoDB (NoSQL)

MEAN Stack

## Projects

### The Movie DB - Android App

FEB - 2017

An application for android that displays information about the popular movies from The Movie Database. The app is designed with a clean architecture approach and using libraries or patterns widely used in the sector as they are: Dagger2, Retrofit2, Renderer pattern and Realm DB.

### Personal business card - Design

NOV - 2016

Personal bussines card design. A minimalist design with the contact details and the name on the front, while on the back side we find a QR code that redirects to this web page. Available in two colors, blue and orange.

### Takitea - Android App

JUN - 2016

This application allows the client to manage the ticket sales of a theater. The user can publish new theater plays with their respective sessions, also allows the client to buy tickets, selecting the session, the seats and the desired type of tickets.

### Writebook - Android App

JUN - 2015

A simple application that allows the user to write short stories and share with a readers community. In this way the reader, can download a few stories each morning and be able to read them throughout the free time that he has through the day.

## Education

### Bachelor Degree in Computer Engineering

2013 - 2017

Polytechnic University of Catalonia

### Android Fundamentals Course

2015

Google Student Ambassador Program

### MongoDB for Developers Course

2015

MongoDB University
